

Concentrate of L-Carnitine, Caffeine, Organic Silicon, Artichoke Extract, Green Tea Extract and Marine Glycogen. Active ingredients that fight against localized fat clusters. Organic Silicon stimulates the production of collagen. The artichoke and green tea are draining that facilitate the elimination of toxins in the skin.

## ACTIVE INGREDIENTS

### L-CARNITINE AND CAFFEINE:

L-Carnitine, called "the fat-eating molecule", is directly related to the process of "orange peel" formation. During meals, excess ingested food is transformed in the liver, into lipids. Lipids become into fatty tissues that act by storing energy. When the body needs it, fats are released and burned in power plants. L-Carnitine, plays an essential role in this last

stage, ensuring the transport of fats to these plants. The lack of L-Carnitine, prevents this process from taking place, causing a cluster of fats and externally translates into what we call "orange peel" and cellulite. On the other hand, the more L-Carnitine there are, the more fats are burned and consequently thinning, more energy is recovered and the cold and fatigue is better resisted.

All these mechanisms have been evidenced by numerous teams of researchers (mainly Dr.Tao in the United States). It has also been discovered that the association of L-Carnitine with Caffeine is even more effective in the fight against cellulite.

Caffeine is a substance used for its high slimming powers, since its function is to extract fats from the cells where they are deposited.

**ORGANIC SILICON:**

Derived from organic silicon linked to Manuronic acid with multiple properties: anti-wrinkle, moisturizing, stimulates the production of collagen, antiradicals free and antiglicante as well as with known restructuring properties, typical of organic silicon. It is ALGISIUM C2, with the following cosmetic applications:

REPAIR OF THE SKIN - Prevention and restructuring.

PROMOTES THE FIRMNESS AND ELASTICITY OF THE SKIN -

It stimulates collagen production.

LIPOLYSIS - Reduction of body centimeters.

SMOOTHING AND SOOTHING - Anti-free radicals and control of the inflammatory response.

ANTISTRIES - Deep hydration and optimization of collagen quality.

ANTI-EDEMA

**ARTICHOKE EXTRACT:**

Excellent product in the treatment of localized cellulite. Stimulant of lymphatic drainage. It facilitates the elimination of accumulated toxins. The artichoke (*Cynara scolymus* L.) is a plant native to eastern Africa (Ethiopia) and its cultivation has spread throughout the world. It is a natural protector of the liver, the gallbladder and favors the elimination of liquids.

**GREEN TEA EXTRACT:** Green tea contains high levels of Vitamin A, B2, C and E and minerals such as calcium, fluorine, phosphorus, iron, potassium, magnesium, sodium or zinc.

Polyphenols makes it a preventive substance of the first order against aging of the skin.

Thus, it slows down the aging process, improves the elasticity of the skin. Its high caffeine content actively stimulates the elimination of fats. Therefore, it is used as a lipolytic agent.

**PURIFIED MARINE GLUCOGEN:** Energizing, repairing, anti-stress

Glycogen provides the necessary substances to restore the energy of epidermal cells and stimulate cellular metabolism. It has a protective, restorative and regenerative function, it is a specific energizer with revitalizing, regenerating and strengthening effects. Strengthens the epidermal defense and repair capabilities. Glycogen is a reserve polysaccharide of our body, constituted from glucose molecules.
